

ISHEMA NGABO ANGE

Software Engineer | Full-Stack & API Architecture Specialist

Location: Kigali, Rwanda Phone: +250 783 990 705 Email: ishemangaboangel@gmail.com

LinkedIn: linkedin.com/in/ishema-ngaboange-296b06329 GitHub: github.com/ishema20021

EXECUTIVE SUMMARY

Results-driven **Software Engineer** with strong expertise in full-stack architecture, high-performance RESTful API design, relational database optimization, and scalable web applications. Demonstrated technical leadership in engineering secure microservice backends with **Java, Spring Boot, PostgreSQL, and MySQL**, coupled with dynamic frontends built on **React.js and React Native**. Proficient in applying rigorous software development lifecycles (SDLC), clean architecture, network security, and robust system integration.

TECHNICAL COMPETENCIES

Backend Architecture & APIs Java, Spring Boot, RESTful APIs, Spring Security, Microservices Architecture, C, PHP	Frontend & Mobile Engineering React.js, React Native, JavaScript (ES6+), HTML5, CSS3, Responsive UI/UX
Database Management & Systems PostgreSQL, MySQL, Oracle SQL, Schema Design, Query Optimization, ORM (Hibernate)	DevOps, Networking & Tools Git, GitHub, TCP/IP, Routing/Switching, Network Security, Linux, IntelliJ, VS Code

ENGINEERING PROJECTS & TECHNICAL OWNERSHIP

Intelligent Tourist System Lead Developer Academic Final Project

Full-Stack Enterprise Web Application | Java, Spring Boot, PostgreSQL, REST APIs

- Architected and implemented an end-to-end web platform powering dynamic booking algorithms and personalized tourism workflows.
- Designed high-throughput RESTful API endpoints for secure, decoupled communication between client interfaces and server logic.
- Engineered a normalized relational database schema in PostgreSQL, ensuring ACID compliance, data integrity, and low-latency query execution.

Courier & Shipment Tracking System Full-Stack Developer Enterprise Project

Logistics Management System | Web Architecture, SQL, API Integration

- Developed a real-time parcel delivery tracking system featuring automated status updates and audit logging.
- Structured database tables and queries to handle high-frequency status transitions efficiently under multi-user concurrency.

E-Commerce & Digital Procurement System Developer Academic Project

Scalable Shopping Platform | Java, MySQL, Frontend State Management

- Built an e-commerce backend supporting complex product catalogs, order processing state machines, and shopping cart logic.

PROFESSIONAL TRAINING & FELLOWSHIPS

2CodeConnect Fellowship II — SOLVIT AFRICA 2026 – Present

Advanced Mobile Application Stack (React Native)

- Specializing in cross-platform mobile app development, state management, and mobile API integration using React Native.
